

WhiteboxGo VS Competitor

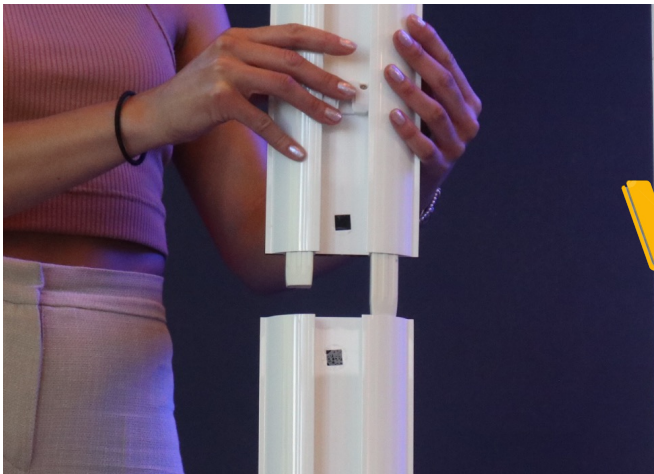

WhiteboxGo (Top)
The same size unit with 30% less packaging.

WhiteboxGo
Unique hidden internal transformer

Competitor
Bulky and untidy external transformer

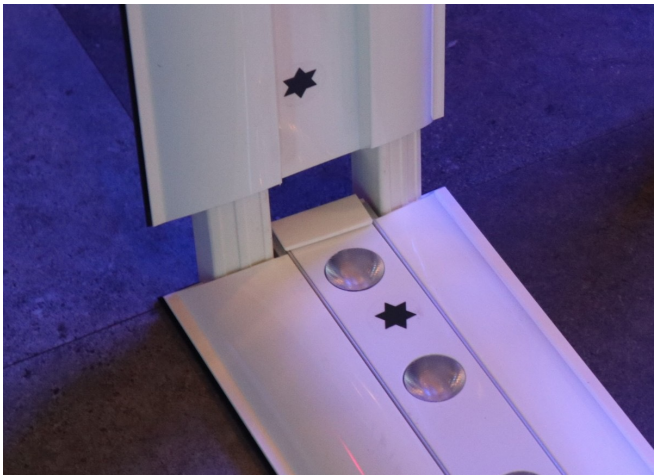

WhiteboxGo
Internal wires to connect circuit.

Competitor
Brittle push click connectors and external wiring

WhiteboxGo (Left)
LEDs built safely inside the frame vs unprotected external LED prone to damage

Internal wiring as well as built in right angle and straight connectors Vs loose connectors and wiring prone to loss or damage

Before buying your lightbox, ask your supplier these questions

- Does my lightbox have hidden internal wiring system meaning I don't need to connect the circuit?
- Does my lightbox have a unique hidden internal transformer rather than a bulky external one?
- Does my lightbox need minimal pieces to build?
- Does my lightbox have all right angle and straight connectors built in reducing the amount of pieces needed to build the lightbox?
- Does my lightbox have built in and protected LEDs?
- Does my lightbox have the option for a flight case, literature holders and shelving?
- Does my lightbox come in Black and White profiles?

If you answered NO to any of the above, you're not buying a Whitebox!
